

DISCOVERING the SCIENCE of **ALCOHOL**

DSA Concepts

DSA Concepts is an illustrated outline of the three science content areas addressed in the DSA program: chemistry, physiology and neurology. The content areas addressed in each exploration are highlighted throughout the DSA Teacher's Guide to make lesson planning convenient and easy!

The DSA program comes with a full complement of teaching tools to engage your students in science: Teacher's Guide, Interactive Web site and Teacher Background section with a National Science Education Standards chart; tips for implementing the program in your classroom; glossary of terms; references, additional resources and information related to the science topics covered in DSA.
